A LOCKER, in seamen's parlance, is a place where stores are kept. Jones is a place where stores are kept. Jones is a corruption of Jonah, and Davy is "duffy," the name among West Indians for a spirit or ghost. "Gone to Davy Jones' locker" is, therefore, "gone to a place of safe-keeping, where Duffy Jonah was sent." The expression is generally applied to one lost overboard, the reference to Jonah being obvious the reference to Jonah being obvious.

When on the union of the two crowns London was inundated with Scotchmen, Buckingham was the chief instigator of the movement against them, and parties used to go about every night and break their windows. To retaliate, a party of Scotchmen smashed the windows of the Duke's mansion, which had so many glass windows that it was called the Glass House. The court favorite appealed to the King, who replied, "Those who live in glass houses should not throw stones.

Nobody knows where the potato came from originally. It has been found apparently indigenous in many parts of the world. Mr. Darwin, for instance, found it wild in the Chonos archipelago. Sir W. J. Hooker says that it is common at Valparaiso, where it grows abundantly on the sandy hills near the sea. In Peru, and other parts of South America, it appears to be at home, and it is a noteworthy fact that Mr. Darwin should have noted it both in the humid forests of the Chonos archipelago and among the Central Chilian mountains, where sometimes rain does not fall for six months at a stretch. It was to the colonists whom Sir Walter Raleigh sent out in Elizabeth's reign that England is indebted for potatoes. Herriot, who came out with these colonists, and who wrote an account of his travels, makes what may, perhaps, be regarded as the earliest mention of this vegetable.

until the twelfth century, and even then they were made the subject of legislation, as windows were at a later day. Only one chimney was allowed in a manor-house, one in a religious house, and one in the great hall of a castle. When fireplaces became the luxuries of the rich, the flues extended only a few feet into the thickness of the wall, and were then turned out through the wall to the back of the fireplace, the openings being small oblong holes. In the days of Henry VIII. no fireplace was allowed at the University of Oxford. Indeed, it was not until the beginning of the six-teenth century that the old state of things-a fire in the center of the hall, the smoke escaping through the roofwas altered. An examination of the chimneys in the great halls of manorhouses will prove that they must have been inserted about this period.

Covering Boilers with Silk.

It is well known that silk is an excellent non-conductor of heat, and some recent experiments in Germany would seem to indicate that it might pay to incase boilers in this costly material. In one trial three boilers of the same size and make were ranged in order, one covered with the ordinary felt, another with a coating of silk only five-eighths of the thickness of the felt, while the third was left altogether uncovered. They were all filled with water having a temperature of 100 degrees Centigrade, and examined at intervals. After the lapse of three hours it was found that the unprotected boiler had lost twelve degrees of heat, and the other two each two degrees. After a further lapse of thirty-three hours, the felt-covered boiler had lost thirteen and a half degrees, and that covered with silk only fourteen, so that there was no appreciable difference between the protective powers of the silk and those of a casing of felt nearly twice its thickness. With regard to the cost of the material, it is said that in all silk manufactories there are waste scraps which it would be difficult or impossible to utilize in the trade. These can, it is asserted, be made up into bands and rolls, costing comparatively little, and sold at a profit to the makers and users of boilers. As to the lasting and wearing powers of silk as compared with felt, nothing is said, and there has not, perhaps, been time to apply an adequate test; but it is, at the least, possible that in this respect the finer substance may possess great advantages over the coarser and cheaper.

Phil Sheridan Court-Martialed.

"It was just previous to the battle of Pea Ridge," said Gen. C. H. Frederick, of Omaha, formerly Lieutenant Colonel of the Fifty-ninth Illinois Infautry. "What was the charge against Sheri-

"At that time he was a Captain, and had charge of the commissary supplies of Cartis' army, then moving down on Price, and had gotten into a wrangle with Cartis on account of delays in moving his supply tram, which delays, the General thought, were unnecessary and in violation of orders. The exact charge was 'disobedience of orders,' I believe.

"And what was the outcome?"

denly we heard firing off to the right in front of Sigel, and in a short time Sigel was compelled to fall back. A few min-utes later that log but had been torn down, transformed into a barricade, behind which a force of blue-coats were posted, blazing away as fast as they could load and fire, and we were fairly sunched into the famous battle of Pea Ridge, in which Price was defeated," "And did that end the proceedings

against Sheridan?" "It did. Gen. Halleck, commanding that department, was not specially fa-vorable to Curtis, and I received orders to send all the papers in the case to department headquarters at St. Louis, and in a short time after the battle Sheridan was assigned to another command.'

GLASS HOUSES.

The Britle Substance Better for Building Purposes these Stone.

[Pittsburg Dispatch.] Perhaps not on builder or contractor in ten, if told that the common grades of glass made at the glass factories in this city have a crushing strength nearly four times as great as that credited by experienced engineers to the strongest quality of granite, would accept the statement as true. Yet it is a fact, and being so, the query as to why glass has not received more attention from architects as a structural material naturally suggests itself. A reporter had a talk with several prominent glass manufacturers on the subject, and in answer to an interrogatory as to whether blocks of glass could be made in suitable lengths and sizes and so annealed as to be utilzed in the construction of a building in place of stone, they said it could be done. Said one of these gentlemen: "This question has been considered by myself a number of times, and, although I do not want to advocate the absolute abolition of brick and stone, yet in the erection of art galleries, memorial buildings, etc., a structure composed of blocks of glass in prismatic colors would be a unique, beautiful and lasting structure. With the numerous inventions which have come into use of late years in connection with the production of glass, the cost has been gradually going down, while the quality of the labric is steadily becoming better.

"One objection which would be raised

to the durability of a glass house, in the literal sense of the words, might be that the blocks would not take a bind, or adhere together with common mortar, This objection can be readily set aside by the use of a good cement, and when completed the structure will stand for ages, barring extraordinary accidents. As to the cost of a glass house, it can be kept down to a small percentage above the price of our cut granite. In building with stone you have to pay the stone masons, and when it comes to elaborate examples of carving in Corinthian pillars, collars, capitals, etc., why the work is rather costly as compared with glass, when the latter can be molded into any shape or form, and the work accomplished in much less time. I am convinced that the time will come when we will see such a building erected. Scarcely a day passes but what the sphere of glass as an article of use becomes widened. CHIMNEYS were unknown in England | In parts of Germany and on one line in England glass ties are being used on railroads, and thus far have given satisfaction, combining all of the requisites of wooden ties with the virtue of being susceptible to usage at least twenty-five per cent, longer than wood. Then by the Bastra process glass articles are now being made for common use which can be thrown on the floor and will rebound like a rubber ball. Progress is also being made towards rendering glass, which has ever been characterized as the brittle fabric, ductile, and to-day threads of glass can be made that can be tied in knots and woven into cloth. Were one disposed to give play to fancy and fuse it into fact, a house entirely composed of glass could be built with walls and roof and floors fashioned from melted sand. Carpets of glass could cover the floors. The most ultra æsthete, sitting on glass chairs or reclining on glass couches, arrayed in glass garments, esting and drinking from glass dishes, such a one could realize that the age of glass had come. Yet nearly all of this fifty years ago would have been classed with the then impossible telephone and electrie light, and this statement would have likely found its place in the 'Catalogue Expurgatoros,'"

She Fetched Him.

Women sometimes have great presence of mind. A jailor's wife saw that a prisoner had got between her husband and the unlocked door and was going for it like a Scotch terrier for a rat hole. She knew she hadn't the strength to seize and hold him, and besides he had a knife, so she didn't try. But she stepped into a side corridor near the head of a fight of stairs the prisoner had got to descend, yanked off her hoopskirt, and, as he passed, flung it before him. The way he turned handsprings and somersaults down those stairs was a caution to cats, and his frantic struggles after he reached the bottom would have attracted folks from a deg fight. When the jailor came up, the fellow had got himself so entangled that he was absolutely helpless, was doubled up in ter ibly uncomfortable ways and was choking to death, and so completely wound up that the jailor had to cut him out with a hatchet, and it took half a yard of court plaster and a pint of arnica to make him at all comfortable,-Boston Post.

" Kicking Agin Nothin." A farmer in the Vermont Legislature had charge of a good bill and had modestly spoken in favor of it. A young politician replied in a long, frothy, high-falutin speech against it. All eyes turned to the farmer, expecting to see him rise in defense of his bill. Observing this, after a time he slowly rose, and elevating his voice to a squeaking pitch, said, "Mr. Speaker! I see my friends expect me to answer the honorable gentleman who has just set down. I can't, Mr. Speaker, I can't; it allus wrenches me so to kick agin nothin." His bil passed nom. con. How many little and big people do wrench themselves, or waste their strength, by worrying over things of no account, -American Agriculturist.

A concerred young fellow said to a fair partner at a reception : "Don't you think, miss, my mustache is becoming?" To which she replied, "Well, "The court assembled, pursuant to order, in a little log hut. Sheridan had not yet put in an appearance, when sud-

A Confidence Dodge Played on th Western Coast,

Of the many tricks of those who live by their wite to take in the unwary, the "gold nugget pin dodge" is the most successful. This oft-practiced game was

successful. This oft-practiced game was played upon a citizen who has often prided himself as being "no fool."

As he was passing the Baldwin Hotel, he saw a seedy, semi-respectable-looking party, who was walking a few steps ahead of him, stop, and, stooping, appear to pick up something bright, which, when held up to the light, was seen by the citizen to be a nugget pin, evidently solid gold, and weighing fully an ounce.

"What a lucky find!" remarked the overloved stranger to the citizen, as he

overjoyed stranger to the citizen, as he gleefully held it up for the latter's inspection. "It's worth considerable," continued he, and it's a wind-fall to me, for I'm dead broke. I wish I could sell it."

"What do you want for it," asked the uneuspecting victum, who thought he scented a chance to turn an honest penny by a neat business.
"Well, I don't know what it's werth.

I wish there was a pawnshop open. Give me ten dollars and you can have it." "Ten dollars for a \$20 nugget; too

"Ten dollars for a \$20 nugget; too much,' thought the victim, and then "Can't do it," remarked he aloud.
"Well, I am hard up. Now, what will you give?" persevered the stranger, who appeared to hesitate to take less. The shrewd citizen finally secured the pin for \$4.50, only to find when he had the purchase examined that it was a good imitation of gold, but being only made of brass, it was not worth as much as he paid for it by \$4.49. The victim has cut another eye-tooth, and now declares that he would not buy a gold mine at any price from a stranger. - San Francisco Post.

"FEMALE COMPLAINTS."

Dr. R. V. Pierce, Buffalo. N. Y.: Dear Sir-I was sick for six years, and could scarcely walk about the house. My breath was short and I suffered from pain in my breast and stomach all the time, also from paintation and an inter-nal fever, or burning sensation, and experienced frequent amothering or choking sensations. I also suffered from pain low down across my bowels and in my back, and was much reduced in flesh. I have used your "Golden Medical Discovery" and "Favorite Prescription," and feel that I am well. Very respectfully, DELILAR B. MCMILLAN, Arlangton, Ga.

AN EXCHANGE has these truthful words to boys: "The boy who spends an hour of each evening lounging idly on the street corners is wasting, in the course of the year, 365 prescious hours, which, if applied to study, would familiarize him with the rudiments of almost any of the familiar sciences. If, in addition to spending an hour each evening, he wastes ten cents for a cigar, which is usually the case, this worse than wasted money would pay for ten of the leading periodicals of the country. The gratification afforded by the lounge on the corner and the cigar is not only temporary but positively hurtful. You cannot indulge in them without hurting yourselves. You acquire idle and wasteful habits which cling to you with each succeeding year."

CANCERS AND OTHER TUMORS are treated with unusual success by World's Dispensary Medical Association, Buffalo, N. Y. d stamp for pampmet

THE Damaras of South Africa have a keen appreciation of the shades of color marked on their cattle and have twentysix terms for them, but have no name: for colors that are not cattle colors.

FOR weak lungs, spitting of blood, shortness of breath, consumption, night sweats and all lingering coughs, Dr. Pierce's "Golden Medical Discovery" is a sovereign remedy. Superior to eod hver oil. By druggists.

THE Mormons had an idea that President Taylor was stealing from them, and when he got a hint of it he replied : "Let me see the man who said so and I'll hang him inside of an hour!" That settled the question of his honesty.

Certain Knowledge.

We know whereof we affirm when we say that Warner's Safe Kidney and Lever Cure has performed more wonderful cures than any medi-cine ever brought before the American public. An experiment has been tried and with

success, of propagating sponges by cut-tings in the Adriatic Sea. The period of growth generally averages seven years.

In another column will be found the advertisement of ALLEN'S LUNG BALSAM. We do not often speak of any proprietary medicine, but from what we have seen and heard of this great family medicine, we would say to those suffering with any throat or lung disease, to take it and be cured.

A New York Tribune correspondent believes that cotton-seed oil may yet replace lard for cooking purposes, and he thinks a pure vegetable oil should be preferred to the "product of the swine.

THE cures which daily result from the use of Lydia E. Pinkham's Vegetable Compound in all female diseases are really surprising.

HALLER says that in adult men laugh ter partakes of the character of the vowels o and a, with women and children it has more the character of e and i.

KIDNET-WORT radically cures biliousness, piles and nervous diseases.

Senatorial Perquisites Many Years Ago.

Francis Maloone, a United States Senator from Rhode Island, died in 1809. His remains were interred in the Congressional Cemetery. Among the items of expenses for his funeral were the following : Sixteen pounds of crackers, \$3; 111 pounds of cheese, \$2.81. The committee to audit the expenses of the Senate evidently thought that, though their brethren seemed to be on pleasure bent, they should have the accompaniment of a frugal meal. Therefore, they economically ordered that payment be made for the crackers, but rejected the claim for the cheese. This same committee also had presented to it the following voucher: Seven gallons best Maderia wine \$28 06

Total.....\$45 60 The committee, after cogitating the matter, came to the conclusion, perhaps, that the partakers of these luxuries had had almost too good a time of it, and so they only allowed "for four gallons of wine and three quarts of brandy, \$22."-Washington Letter in the Louisville Courier-Journal.

A MAN is wiser for his learning, and the sooner he learns that the only proper way to cure a Cong) or Cold is to use Dr. Bull's Cough Syrup, the better he is off.

The City and the Country.

The Rev. Robert Collver made the remark on one occasion that during his twenty years' residence in Chicago he had not known of a single man who had come prominently to the front in any pursuit who was born and bred in a large city. All the leading men in every calling—judges, hawyers, clergymen, editors, merchants and so on, had been reared in the country, away from the follies, the vices and the enervating influences that are known to exist in all large towns, The New York Times takes up the same

subject and says:

Fashion reduces all young men and women to the same dull and uninteresting level. New York is now an old city. It has produced generations of men. How few of them have ever made their mark, here or elsewhere! It cannot be said that they go into other parts of the country and there develop the higher forms of manhood. They are never heard of except in the aggregated, concrete form of "our fellow-citizens."

How much of a man is due to qualities born in him, and how much to his early environment, no philosopher has been able to tell us; but it is impossible to conceive of a sagacious intellect like that of Lincoln, or a glorious mind like Webster's, emerging from the false glitter and noisy commotion of the city. We think of Washington, the patrician sage, pacing among the stately oaks of old Virginia, of Jefferson in his country seat, and of John Adams tilling his farm in Massachusetts. These men, it is true, flourished in a time when there were no big cities in the United States. But later on we see Lincoln, Grant and Garfield reaching the topmost round of fame's ladder from the obscurity of country homes. Not one American President from first to last was born in

ARABS are very lively in talk, quick, full of gesticulations and arguments, intensely inquisitive, great chatterers, shouters and screamers. They surpass the Jews in fanciful names. From the swarms of girls in the seminary at Beirut, conducted by American ladies, the following names have been set down in English translation: Miss Fascinating Fly, Miss Sociable Slider, Miss Safe Chatterer, Miss Victor Camel-Driver, Miss Benevolent, Old Shoe, Miss Pink Thick Lip, Miss Enough, Miss Diamond Molasses-Maker, Miss Blessed Butter-Maker, and so on.
